

RAIL TRACKING SYSTEMS

ACS Flown Tracks

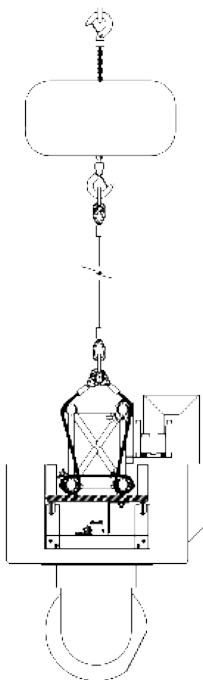

Over thirty years knowledge and experience in design, build and operation; ACS tracks are unique

Our flown track systems can be used in a wide range of applications. Suspended horizontally or angled, they run up to 125m in length with a top speed capability of 12.5m/second. The in-house designed integrated cable management system negates the need for RF and provides a robust hard cable link.

Whether shooting film or HD, ACS tracks have the versatility to carry open stabilised mounts such as the Libra head and STAB C Compact, the HD Cineflex V14 housing the Sony 1500 camera or the ACS SMARThead™ remote head with Sony P1 camera.

Our family of smaller tracks can also be used for flown applications offering a more lightweight rig. These tracks are ideal for repositioning shots or slow and subtle tracking shots where speed is not a necessity.

ACS flown tracks are fitted to standard lighting box truss for ease of installation with chains and hoists and are provided with a full team of specialist technicians and operators.
