

## Complementing ACS' ground and flown tracks are the mini vertical tracks.

The ACS mini vertical track, originally designed and developed in-house for the live coverage of athletics field events, is available in a 4m or 7m length and comes fitted as standard with an ACS SMARthead™ remote head and Sony HD 2/3" camera for OB integration as well as digital film cameras such as the Sony F55.

The system can be installed and operated in a free standing configuration (see base stand below) or against a suitable vertical structure. The track can also be inverted and hung on truss thereby reducing any floor space required.

The advanced control features give the single operator full dynamic control over position, speed and acceleration. The combination of the ACS mini vertical track and SMARthead™ remote head facilitates extremely smooth live on air tracking shots emulating 'jib like' movement in a reduced footprint making it ideal for use in a range of entertainment, concert and live sport applications.
