

“the world’s leading specialist
camera company”

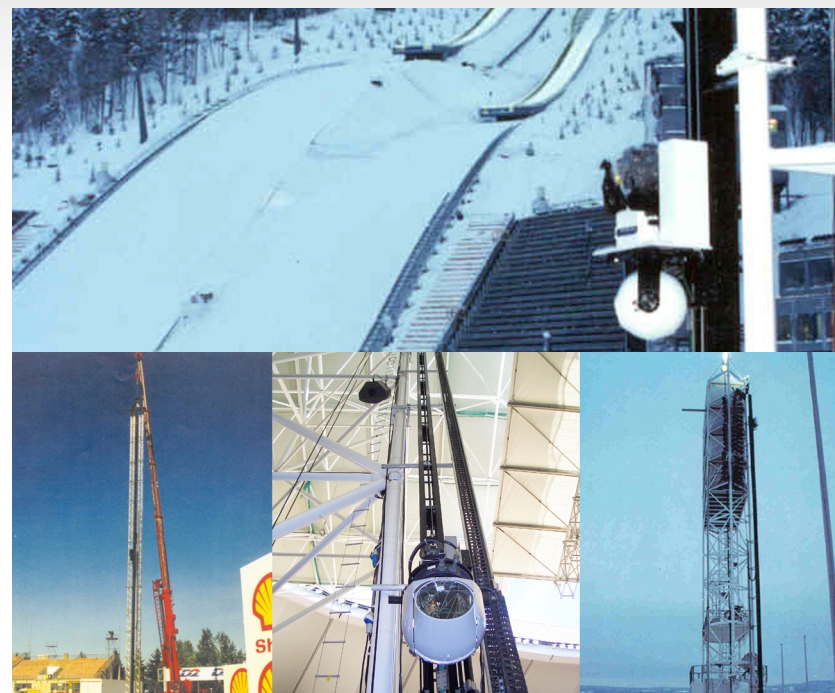

Aerial Camera Systems

MK4 System

The Mk4 Vertical System was originally built for the 1993 McCartney world tour. The Mk4 system can be split into 2 systems or a single vertical up to 30 metres.

The system can support a Wescam 16", Leo or Cineflex V14 HD stabilised camera mount with velocities up to 5 metres/sec. The MK4 track system retains unique capabilities, especially in conjunction with stabilized systems, in terms of distance, payload and performance.

Further information available on request.
