CAMERAS AND RECORDERS

## Polecam

ACS has added to its inventory with the Polecam. Offered with a selection of different minicams it's ideal for delivering jib like movements in hard to reach places.

The Polecam system uses carbon fibre tubes that slot together to create a reach from 1.5m to 8m. A remote controlled pan/tilt head fits to the carbon poles creating a simple lightweight camera jib.

For live broadcast events, ACS is able to provide a fibre transmission system for video, data and comms to ensure a reliable technical integration onsite – further information available on request.

Polecam is able to get into tight spots where a traditional camera rig may be problematic. A one person operation, Polecam is a great cost effective solution for delivering dynamic shots. Its pan and tilt narrow head can complete a 360 degree pan in just 3 seconds and can be fitted with a variety of minicams including the Antelope PICO, the Toshiba IK- 4K UHD and the CIS VCC HD1X.
